

New Functionality on *LoadTrak 1X Lite*

GeoFencing, Digital Inputs, GeoCoding, and Display Filters...
What does this mean to you? You now have the flexibility to customize your mapping options to suit your specific business needs.

The **LoadTrak**TM solution is an end-to-end web-based hosted service that provides a wide range of tools to help you manage efficiency, productivity, and safety of your vehicles. You will have 24-hour, seven days a week access to vital information and real-time data for all of your vehicles. **LoadTrak** solutions use Global Positioning System (GPS) technology and the internet to provide complete and reliable communication, tracking and reporting capabilities to fleets across North America.

New Functionality

- **GEOFENCING**

Allows you to define a virtual boundary on the map. When a vehicle enters or exits the defined area, a notification through an e-mail alert will be sent to your company contact.

- **DIGITAL INPUTS**

Allows you to generate sensors (e.g., Blade Up/Down or Sander On/Off) which are monitored by an electrical signal that determines whether the sensor is up or down, open or closed, etc.

- **GEOCODING**

Allows you to search for a precise Legal Subdivision (LSD) location on the map. Once the LSD information is assigned, the exact geographic location appears on the map.

- **DISPLAY FILTERS**

Allows you to choose how you want vehicles displayed on the map by using a defined group of criteria. Filters are created by selecting field and condition requirements.

The **LoadTrak** solution provides the stability, security, innovation, and excellence that your company deserves.
